## From Shadow AI to Enforceable Oversight with Maro

AI adoption is happening without permission.

And without behavior-level visibility, AI policy can't be enforced. That's because AI usage risk emerges from human decisions, specifically in the task, the prompt, the data shared, and who shared it.

Traditional controls can't see or act intelligently at the moment of action. **Maro was built to close this gap.**

Employees that use AI tools *without formal approval*  
KPMG Trust in AI Report, 2025

## Secure AI Adoption with Maro

Maro's cognitive security agents operate in the browser, providing behavior-level AI observability and real-time intervention where policy enforcement actually matters. Getting started is fast and easy.

## What You'll Receive

- Shadow AI Risk Report:** An executive-ready view of AI usage and exposure across the organization, grounded in real employee behavior.
- AI Policy Gaps Inventory:** Guidance for evolving AI governance by illuminating where widespread AI usage exists without clear policy controls defined.
- Enforcement Readiness Roadmap:** Direction on introducing enforceable AI guardrails, prioritized by where they'll deliver the greatest risk reduction.
